finishing **options**

Ask an experienced decorative concreter to help you achieve these finishes

boralstone®

POLISHED CONCRETE
A smooth, flat finish used for internal areas, revealing the decorative aggregates in either a full depth, medium or partial exposure. Polished concrete can be sealed, similar to timber floor boards or highly polished like stone or terrazzo.

BURNISHED CONCRETE
A smooth, flat finish used for internal areas where there is no exposure of aggregates; fines in the concrete may be exposed, resulting in a lightly speckled appearance.

HONED CONCRETE
Recommended for external areas allowing the flow through of your polished concrete internally to honed concrete externally. Honed concrete is ground to a coarse cut allowing for slip resistance requirements for external elements. Honed concrete brings to life driveways, patio areas and pool surrounds.

colori®

BROOM, COVING TROWEL, SPONGE & INPRINTS
Innovative and economical method to create various textures, lines, patterns, shapes and other effects into the concrete surface.

SANDBLASTING
Removing the top layer of concrete to create a rough or sandy look or to expose stones in sections and patterns. Please note that the colori® range does not include decorative aggregates.

SAW CUTS AND GROOVES
Create tiled effects, lines and shapes using a saw or hand tool.

SURFACE SEEDING
Adding small amounts of stones, pebbles, rock salts, etc. into the surface by hand before the concrete sets. Rock salt dissolves when washed to create indents.

exposé®

LIGHT EXPOSURE
Taking 1–2mm off the surface after placing reveals less stone. Great for footpaths or outdoor areas.

HEAVY EXPOSURE
Taking 3–5mm off the surface after placing reveals more stone for a more coarse surface. Great for driveways or areas requiring more grip. Please note that overexposure may cause stones to separate from the surface.

luminesque®

GLOW-IN-THE-DARK CONCRETE
luminesque® is Boral's concrete aggregate application that produces a bright glow-in-the-dark – illuminating polished concrete floors, pool surrounds, garden pathways, outdoor areas and driveways.

The addition of brilliant luminescent aggregate technology radiates light in the dark for hours after daylight sun exposure. luminesque® can now be used in exposé and boralstone®.

important **information**

Please read before you order

PLAN AHEAD
Decorative concrete uses speciality ingredients. Please notify us of your total job requirements and allow a minimum of two working days notice from the date the order is placed with Boral. Check weather forecasts in advance, it is vital to the quality of the concrete that it is not exposed to rain, hail, wind, debris or very hot or humid conditions during the placing/ setting process.

USE A PROFESSIONAL
Decorative concrete products require greater attention and or measures when placing and finishing beyond that of regular concrete. Please consult an experienced decorative concreter about the specific requirements of your project. Ask to see their portfolio of past projects.

DOUBLE CHECK
When your selected mix is delivered to site and before it is placed, we advise you confirm that the description and product are what you have ordered. Carefully read the information on the delivery docket. As a double measure, ask the delivery driver to wash off a sample for your inspection. Be sure to wear protective clothing and glasses when handling concrete.

PROTECTION
Always use quality concrete sealing, finishing or exposing agents. Sealing your project will improve the appearance, protect against weathering and extend the life of your concrete.

NO ADDITIONAL WATER
Your concrete will be designed for a specific water ratio or "slump" as prescribed on the delivery docket. Adding water beyond the prescribed slump may make it easier to work with, however it will also cause a loss of strength and lead to cracking, bleeding and/or dusting issues. Addition of water will create colour variations to your finished product.

CONCRETE BURNS
Cement-based products such as concrete have corrosive properties that may be harmful to the skin or eyes. Please wear appropriate personal protective equipment at all times when handling cement products.

ENVIRONMENT
Cement-based products such as concrete can cause lasting damage to the surrounding environment if not properly controlled. Please ensure you or your concreter contains all concrete material and properly disposes of the waste. Consult your local council for more information or advice.

NATURAL PRODUCTS CAN VARY
Boral Decorative Concrete contains aggregates and other materials that originate from natural quarry products, therefore some variation in appearance and consistency may occur.

We recommend making final colour selections from an actual sample. The illustrations and/or samples pictured are intended as a guide only and not an exact representation of the finished product. Material may contain traces of iron found in quarries that could stain the concrete.

visit **us**

We highly recommend visiting our Subiaco display centre, to receive advice and see our concrete mixes before purchase.
