Building Durable, Safe and Sustainable Mining Infrastructure

Who we are

Boral is a trusted Australian construction materials supplier with over 80 years of experience, delivering high performance quarry, concrete, cement and asphalt solutions essential to mining projects nationwide. Our integrated national supply chain ensures consistent quality, reliable performance and project certainty.

How we deliver value

We combine technical expertise with dependable supply to deliver safe, durable and efficient outcomes. This is supported by our focus on lower carbon materials, resource efficiency and responsible recycling practices that reduce waste and conserve natural resources.

Our value to the mining sector

Safety first, always

Safety is fundamental to how we operate. Our Zero Harm approach, Life Saving Rules and strong WHS governance align with the rigorous demands of mining environments, supported by a workforce trained for high-risk, complex conditions.

Boral Solutions

Remote & site-ready delivery

We deliver reliably across regional and remote locations, mobilising quickly and integrating seamlessly into live mining operations.

Capability includes:

- Mobile asphalt plants and on-site production
- Remote logistics and road train mobilisation
- Shutdown and fast turnaround works
- Compliance with site onboarding and operational requirements

Technical expertise for mining applications

We design and deliver pavement solutions in accordance with prescribed specification built for heavy-duty mining conditions.

Asphalt and spray seal design and application with ability to incorporate specialised process and binders.

Sustainability & circular materials

We support mining customers in achieving sustainability goals through practical, high-performance solutions:

- INNOVO® technology incorporating recycled materials, where suitable source materials exist and align with project requirements.
- Reuse of mining tyres in asphalt applications
- Lower-carbon and alternative binder technologies
- Focus on resource efficiency and waste reduction

Execution & Performance

From planning through to maintenance, we deliver integrated paving, testing and site execution, reducing interfaces and keeping operations moving.

Our experience across major infrastructure projects translates directly to mining, where durability, precision and compliance are critical.

Why partner with us

- Safety-first culture aligned to mining operations
- National scale with strong local delivery capability
- Proven expertise in heavy-duty pavement performance
- Trusted in remote and operational environments
- Integrated supply chain for certainty and control
- Advanced sustainable material solutions

Integrated supply & national capability

As a vertically integrated supplier, we provide end-to-end control across materials, production and delivery.

- Secure supply of aggregates, binders and asphalt
- In-house production, paving and testing
- National technical network and quality assurance

This reduces risk, simplifies delivery and provides cost and schedule certainty.
