# Environmental Monitoring Report

## Blast Monitoring Data

February 2025

**Building  
something  
great**

This monitoring report is to satisfy the requirements of Section 66 (6) of the Protection of the Environment and Operations Act 1997, to make available, within 14 days of obtaining any monitoring data that relates to pollution under an Environment Protection Licence

The monitoring of pollutants provided in this report is undertaken as per the requirements of Environment Protection Licence 2261 (EPL: 2261 – Boral Teven Quarry)

<b>Teven Quarry Information</b>	
Premise Details	Boral – Teven Quarry
Address	North Teven Road, Teven NSW 2478
Licensee	Boral Resources (Country) Pty Limited
EPL No	2261
EPL Location	<a href="#">ViewPOEOLicence.aspx (nsw.gov.au)</a>
Date of dataset update	18/02/2025

Monitoring data in this report relates to the monitoring undertaken in the reporting period for the following environmental pollutants:

- Blasting

**Building  
something  
great**

## Blast Monitoring

Blast monitoring is conducted as per condition L5 of EPL 2261.

### Qualifications related to Blasting Activities

#### Extracted from EPL: 2261

- Blasting in or on the premises must only be carried out between 0900 hours and 1600 hours, Monday to Friday. Blasting in or on the premises must not take place on weekends or public holidays without the prior approval of the EPA.
- Blasting at the premises is limited to 1 blast on each day on which blasting is permitted.
- The airblast overpressure level from blasting operations at the premises must not exceed:
  - 115dB (Lin Peak) at any noise sensitive locations for more than five percent of the total number of blasts over each reporting period, or one blast in each reporting period, whichever is the greater.
  - 120 dB (Lin Peak) at any time at any residence or noise sensitive location.
- Ground vibration peak particle velocity from the blasting operations at the premises must not exceed:
  - 10mm/sec at any time at any noise sensitive locations.
  - 5mm/sec at any noise sensitive locations for more than five percent of the total number of blasts in the reporting period, or one blast in each reporting period, whichever is the greater.
- To determine compliance:
  - a) Airblast pressure and ground vibration must be measured at any residence or noise sensitive location that is likely to be most affected and is not owned by the licensee or subject of a private agreement between the owner of the residence or noise sensitive site and the licensee as to an alternative blasting level - for all blasts carried out in or on the premises; and
  - b) Instrumentation used to measure the airblast overpressure and ground vibration must meet the requirements of Australian Standard AS2187.2-2006

\* NOTE: Where no data has been published for a particular date there has been no blasting activity undertaken for that date
