

# Boral Marulan South Operations Newsletter

November 2018

***Boral's Marulan South Operations are pleased to present our regular newsletter for the information of our valued neighbours and wider community.***

## Marulan Kite Festival

**CONGRATULATIONS** to the organising committee of the 2018 Marulan Kite Festival. What an amazing festival this year's event was.

Boral is proud to be a key sponsor of this event as well as working behind the scenes with the committee to make the festival happen.

This year's theme of Time Flies allowed us once again to make kites on the day even though the weather let us down a bit with very little wind.

We were also able to arrange once again Kite Man to make an appearance courtesy of one of Boral's partners Red Kite and with the help of a Boral employee, Sam Bray, volunteering his time to be in the suit.

We also wish to thank companies such as Fenner Dunlop, Coopers Earthmoving, Mine Main, Westrac and Komatsu who work closely with us at our sites and also supported the Kite Festival.

We look forward to being part of the 2019 Marulan on the Meridian Kite festival.

## Employment Opportunities

Both our Marulan South Quarries are recruiting for operator roles.

Marulan South Limestone are currently advertising for a Production Operator, with Peppertree Quarry to seek Fixed Plant operators in the next month or so.

If you are interested head to the website [careers.boral.com.au](http://careers.boral.com.au)

## Bike Safety Week

Safety is important to all Boral operations so we were proud to partner once again with Council and provide sponsorship and Hi Visibility vests for participants for the Goulburn Challenge Community Bike ride and to help promote the message about "Share the Road".

## A New look!

If you see us around town, you may notice the new uniform!

Boral has spent a few months assessing new uniforms for fit, comfort and to meet safety requirements at all our operations before issuing our new uniforms in October.

At the same time, Peppertree Quarry has received a new Excavator, a Caterpillar 6015 to assist in the loading of the in pit crusher.
