

Boral Cement Maldon, NSW

Environmental Protection Licence No. 212

Explanation of units of measure:

mg/m³ = milligrams per cubic metre

g/m²/month = grams per square metre per month

µg/m³ = micrograms per cubic metre

mg/L = milligrams per litre

NTU = Nephelometric Turbidity Unit

Record updated on 04 Dec 2020

Maldon Cement Plant's webpage became live in July 2014. The monitoring data has been uploaded to the internet for public use since that time.

1. Ambient air/dust monitoring

2.1 Dust Deposition Gauges

The measurement is expressed as Total Insoluble Matter (g/m²-month) (grams/square metre/month).

This test measures the levels of the coarse dust (generated mostly from unsealed roads, raw material handling, open stockpiles, etc.). It is a measure of dust *nuisance* (dust on cars, washings, window panes) in the immediate vicinity of the source, as the heavy dust settles quickly and doesn't travel far. It is not an indication of potential health problems as it doesn't penetrate into the respiratory system due to the large size of dust particles.

License limit: Not specified.

The NSW State guideline of 4 g/m²/month (gram/square metre/month) (presented as 12-month rolling average) was adopted.

Compliance Summary: Currently all the dust gauges are compliant with state guidelines. A continuous mitigation process in place by water browser, truck tire wash, and on-site water sprayer. Dust gauge no. 1 is no longer monitored as the land has been sold to another private entity.

3. Water monitoring

Runoff water from the cement works and surrounding agricultural land is captured in various storage dams on-site and used as process water. In heavy rain, excess stormwater from the dam called “West Dam A” is allowed to overflow into the Nepean River. The quality of that water is required by the license to be monitored once per overflow event.

Licence limits:

Biological Oxygen Demand: 20 mg/L (milligram/litre)

pH: 6.5-8.5

Turbidity: 150 NTU (Nephelometric Turbidity Unit)
