# Berrima Colliery - Medway

POELA Act 2011 Monitoring Data - 2024

**Berrima Colliery, Medway, NSW**

**Environmental Protection Licence Number 608, held by Boral Limited**

Explanation of units of measure:

mg/m<sup>3</sup> = milligrams per cubic metre

g/m<sup>2</sup>/month = grams per square metre per month

µg/m<sup>3</sup> = micrograms per cubic metre

mg/L = milligrams per litre

ML/d = megalitres per day

**Record updated on: 14 May 2024**

## 1. *Water monitoring*

Berrima Colliery has two licensed discharge points and four ambient background monitoring points:

### **Discharge Points:**

- Mine Adit - Naturally occurring groundwater is captured in the underground workings and is discharged into the Wingecarribee River. The monitoring point is referred to as V Notch Weir (Licence Point 4).
- Pit Top Dam – Referred to as the Chitter Dam, this dam collects water runoff from the surface facilities area. This dam did not discharge during the reporting period.

### **Ambient background monitoring points:**

- Wingecarribee River upstream of the mine adit discharge at Old Hume Highway Crossing at Berrima (Licence Point 9).
- Wingecarribee River upstream of the mine adit discharge at Macarthur's Crossing (Licence Point 10).
- Wingecarribee River downstream of the mine adit discharge at Biloela Camp Site (Licence Point 11).
- Wingecarribee River downstream of mine adit discharge at Black Bob's confluence (Licence Point 12).

Licence limits for both discharge points are as follows:

pH: 6.5-8.5

Oil and Grease: 10 mg/L

Total Suspended Solids: 50 mg/L

Table 1 shows the results of parameters for Licence Point 4 for which the licence limits apply as listed above.

**Building  
something  
great**

Table 2 provides the data for all of the parameters monitored at the Licenced Discharge Point 4 while Table 3 presents ambient water monitoring data. No concentration limits are assigned to these parameters with the exception of pH, suspended solids, and oil and grease as described above for the discharge point.

**Table 1 – Discharge Monitoring Data (Licence Point 4)**

Sampling Date	Report received	Date published	pH	Oil and Grease (mg/L)	Total Suspended Solids (mg/L)
23/01/17	03/02/17	6/02/17	6.72	<5	24

## 2. Water Volume

The volume of water discharged from the mine is recorded at the V Notch Weir and summarised as follows:

**Table 4 - V Notch Weir Discharge Volume Data**

Licence Limit: 10 ML/d. Compliance summary: Discharge within licence limits.

### 3. Ambient Air/Dust Monitoring

On 30th August 2021, the EPA approved an amendment to the Berrima Colliery EPL removing the requirement to monitor dust. The amendment was because mining and ancillary activities have ceased at the premises which is in the process of closure. Up until the change in the licence, Berrima Colliery operated 4 dust monitoring locations as described below:

- Mine Office Dust Deposition (Gauge 1)
- Medway Village Dust Deposition (Gauge 2)
- Loch Catherine Coal Stockpile Dust Deposition (Gauge 3)
- Mine Entry Road PM<sub>10</sub> Atmospheric Dust (Gauge 4)

The results provided in the following sections have been included for completeness however no further results will be included post 30<sup>th</sup> August 2021.

#### 3.1 Dust Deposition Gauges: Total Insoluble Matter (grams per metre<sup>2</sup> per month)

Gauges 1 to 3 are dust deposition gauges which measure the levels of coarse dust. It is a measure of dust nuisance rather than an indication of potential health problems as this dust fraction does not penetrate into the respiratory system.

Licence limit: Not specified

Adopted limits: For dust deposition, the NSW State guideline of 4 g/m<sup>2</sup> /month (presented as a 12-month rolling average) has been adopted.

<b>August 2021</b> Report Received: 13/08/21 Date Published: 14/09/21	1.68	0.89	0.98
<b>September 2021</b> Report Received: 13/09/21 Date Published: 14/09/21	1.58	0.88	No Result <sup>##</sup>

Compliance summary: The dust levels at site office and Loch meet the adopted criteria. \*Dust gauge missing from Medway Village therefore no result for November 2017.

# Dust gauge destroyed in fire at Loch Catherine (Site 3) therefore no result for June 2018.

## Dust bottle cracked and leaking water, therefore no sample analysed at Site 3 in September 2021.

### 3.2 Atmospheric Dust Sampling

Up until the 30<sup>th</sup> August 2021, Berrima Colliery was required to measure the very small fraction of total suspended particulate matter, namely the 10 micron fraction (PM<sub>10</sub>). This test measures the levels of the very fine dust suspended in the air which is a measure of potential health effects (irritation of the respiratory tract) as the small particles can penetrate into the airways and the lungs. Fine dust can persist in the atmosphere for days or even months before it settles and can travel some distance. Gauge 4 was located near the mine entrance which is midway between the mine facilities and the village of Medway.

Licence limit: Not specified

Adopted limits: The National Environment Protection (Ambient Air Quality) Measure standard of 50 µg/m<sup>3</sup> for a 24-hour average has been adopted. This is in line with current standards for the coal industry.

#### Compliance summary:

The February 2017 result exceeded the NEPM standard at the mine office. The corresponding deposition monitoring data at the mine office and at Medway Village was still in compliance despite the elevated PM<sub>10</sub> reading on the mine site, and therefore deposition rates at the nearest residential receptor remain in compliance.

The December 2018 result exceeded the NEPM standard at the mine office. This was due to localised dust generation resulting from handling of limestone aggregate for use in underground water treatment. The corresponding deposition monitoring data at the mine office was elevated relative to the village and the stockpile sites. Given that the result at Medway Village was still in compliance despite the elevated PM<sub>10</sub> reading on the mine site, deposition rates at the nearest residential receptor remain in compliance. Elevated dust readings will be expected in future as part of the earthworks component of the rehabilitation program.

The November 2019 result was effected by hazard reduction burning in the region, while the January and February 2020 levels were effected by bushfires in the local area.

As Berrima Colliery is now in the process of closure and all mining and ancillary activities have ceased at the premises, the EPA approved a variation to EPL 608 to remove the requirements to monitor Oil and Grease from the discharge point as well as remove the requirement to monitor dust. The results in this report include historic data prior to the change in the EPL for completeness.
