## Peppertree Quarry Environmental Monitoring Report

This monitoring report is to satisfy the requirements of Section 66 (6) of the Protection of the Environment and Operations Act 1997, to make available, within 14 days of request, any monitoring data that relates to pollution under an Environment Protection Licence.

The monitoring of pollutants provided in this report is undertaken as per the requirements of Environment Protection Licence 13088 (EPL 13088 – Boral Peppertree Quarry)

This report provides environmental monitoring data for Peppertree Quarry for the period 1<sup>st</sup> 28<sup>th</sup> February 2019.

## 1. Air Quality

Air Quality Monitoring is conducted as per condition M2 of EPL 13088. The air quality results for the reporting period are tabled below.

<b>Results</b>					
<b>February 2019</b>					
<u>Location</u>	<u>Ash</u> g/m <sup>2</sup> /month	<u>Insoluble solids</u> g/m <sup>2</sup> /month	<u>Soluble Solids</u> g/m <sup>2</sup> /month	<u>Running Annual</u> <u>Average - ASH</u> g/m <sup>2</sup> /month	<u>Running</u> <u>Annual</u> <u>Average</u> <u>Insoluble Solids</u> g/m <sup>2</sup> /month
Monitoring Point 1 (D1)	2.03	3.66	1.52	4.27	7.75
Monitoring Point 2 (D2)	3.22	4.68	2.02	2.90	4.14
Monitoring Point 3 (D3)	2.53	4.56	1.86	2.61	4.79

The deposited dust data for the reporting period indicates that the deposited dust results range from 3.66 g/m<sup>2</sup>/month of insoluble solids at Monitoring Point 1 to 4.68 g/m<sup>2</sup>/month of insoluble solids at Monitoring Point 2.

However, Ash content is considered a better indicator for the quarries contribution to local dust levels, as it is the material remaining after combustibles are removed from the insoluble solids.

Ash levels are in the range from 2.03 to 2.53 g/m<sup>2</sup>/month.

The running annual average for insoluble solids is above the criteria when measured at the gauge location, however it is below the criteria when extrapolated to the boundary as required by the EPL. Todoroski Air Sciences have provided a review of data from 2012-2018 stating "the data shows that the interpolated D1 dust levels at and beyond the boundary would have been well below the criterion level of 4g/m<sup>2</sup>/month for each of the years with estimated levels ranging from 0.52g/m<sup>2</sup>/month to 1.65g/m<sup>2</sup>/month. The interpolated D3 dust levels would also have been below the criterion at the nearest receptors, ranging from 1.48g/m<sup>2</sup>/month to 3.05g/m<sup>2</sup>/month."

A level of 7.75 (the highest annual average insoluble solid measured at D1) extrapolated to the nearest receiver is well below the criteria.

\* Air Emissions Monitoring - High Volume Air Sampler

Sampling Frequency is collection of samples over a 24hr period, every 6 days. Protocols are contained in the Air Quality Management Plan found on this website.

Twenty Four (24) hour criteria is  $50 \mu\text{g}/\text{m}^3$ .

Annual average criteria is 30

Sample Period: February 2019  
 Licensee: Peppertree Quarry  
 Licensee Address: 843 Marulan south road, Marulan NSW 2579  
 EPL No: 13088

### Qualifications related to noise:

- \* The overpressure level from blasting operations at the premises must not exceed 120dB (Lin Peak) at any time
  - \* The overpressure level from blasting operations at the premises must not exceed 115dB (Lin Peak) for more than 5% of the total number of blasts over each reporting period
  - \* Ground vibration peak particle vector from the blasting operations at the premises must not exceed 10mm/sec at any time
  - \* Ground vibration peak particle vector from the blasting operations at the premises must not exceed 5mm/sec for more than 5% of the total number of blasts over each reporting period
  - \* Blast monitoring overpressure and ground vibration is measured at the 4 locations. – North west, north east, Pace and managers residence
- Measurements are online and can be obtained within 15minutes of the blast however blast reports with the data are submitted with 48 hours of each blast

### 3.0 Noise Monitoring

Noise monitoring is conducted as per condition L6 of EPL 13088. The results for the reporting period, monitored in February 2019 are below.

The next round of monitoring will be conducted April 2019.

Sample Period: January 2019  
 Licensee: Peppertree Quarry  
 Licensee Address: 843 Marulan south road, Marulan NSW 2579  
 EPL No: 13088

**Qualifications related to noise:**

Noise is measured quarterly

The identified noise emission limits apply under meteorological conditions of wind speed 3m/s at 10 meters above ground level, and temp inversion conditions. Monitoring protocols are contained within the Noise and Blasting Management Plan found on this website.

Noise monitoring is measured at the 5 residential receiver locations. – R2, R3, R4, R8, R17 since approval of Modification 4 in August 2016.
