

Linwood Marino Community Working Group Meeting

5.30 pm Tuesday 1st May 2008

Seacliff Surf Life Saving Club

Attendance: Alan Brokenshire (Marino Residents' Association)
Glenys Brokenshire (Marino Residents' Association)
Fran Southern (Marino Residents' Association)
Marshall (Marino Residents' Association)
Beryl Hall (Marino Residents' Association)
Serge Caplygin (PIRSA)
Tony Ward (Boral)
Rodney Kazem (Boral)
Paul Whiffen (Boral)

1. Welcome, introduction and overview

Notes of the previous meeting in October had been previously circulated.

2. Review of issues and actions

2.1 Dust

2.1.1 Static Dust Monitors

Rodney showed the location of the 5 static dust monitors on the Linwood aerial photograph and also the dust monitoring results for the 12- months – May 08. Monitors 1, 2, 3, 4 and 5 showed that the readings were below the statutory limit of 4 g/m². Rodney highlighted that results from monitors 3 & 4 nearby the overburden mound were a little higher than normal, as a contractor had been contouring the mound for future Hydro mulching of the Southern and Western sides of the mound.

It was also mentioned that dust recordings on monitor 5 positioned on the Eastern side of the Quarry were potentially background dust readings.

2.1.2 Real time dust monitoring equipment

Rodney updated everyone on the new real-time dust monitoring system that is currently being developed by Kenelec Scientific for Boral Linwood Quarry.

The system has the capability of monitoring dust levels, including wind speed and wind direction real-time at the Linwood Quarry.

Gleny's asked if one of the monitors was going to be stationed at Beryl's House.

Rodney replied that there will be 2 monitors and 1 weather station, one of monitors will be placed close to Marino residents and the other closer to Hallett Cove residents. The weather station will be placed in the Quarry to best represent wind conditions.

2.2 Stormwater – waste water Joint Venture with Marion Council

Rodney provided an update on the Linwood/ Marion Council water recycling project and mentioned that there have been some changes to the original designs to enable ease of construction and less disruption to Quarry operations.

The final designs will be completed shortly with Tenders for construction to be called for once final designs are signed off.

Rodney also mentioned that an onsite meeting with the council will occur in the coming weeks, in which a number of residents from the Marino working group will be invited to attend.

2.3 Tree Planting

Rodney showed a picture of the tree planting proposal for the start of Perry Barr rd and said Paul Whiffen has been working with the Marion Council in regards to a proposal to plant some replacement/infill trees along the Council roadside at the start of Perry Barr rd.

Rodney said the council have given Boral the go ahead to plant the trees and have agreed to the planting of South Australian Blue Gums.

Tree Planting will occur on the 27th of July which is the National tree planting day, Residents from the Hallett Cove working group will be invited to assist in the planting of trees.

2.4 Linwood Overburden Mound

Rodney pointed out the location of the overburden Mound on the aerial photograph and gave an update on the Hydro mulching screening.

Rodney said the hydro mulching on the southern side of the mound has been very successful is growing quite well, since the last meeting the Mound has been reshaped and contoured on the Southern and part of the Western side to provide a more natural look before continuing with Hydro mulching.

3.0 Questions

Fran asked whether the Hallet Cove residents were happy with the Hydro mulching as it looks very nice and also reduces dust.

Rodney replied the residents are happy that we are doing something to screen the unsightly overburden Mound.

Beryl said what's happening in regards to the possible wetlands project at the Storm water capture area.

Rodney replied, The Council are very supportive of the wetlands project and this will be discussed at the next onsite meeting, in which Marino working Group residents will be invited to attend.

Rodney added once the new real time system is up and running, this will further assist us in selecting blasting times more accurately.

Alan said the new dust monitoring system is an excellent idea that Boral are implementing, hopefully it works well.

Rodney replied that he is very confident on the systems operation and once it is up and running will show residents how the system it works.

4.0 Where to from here

It was decided that we would continue hold meetings 6-monthly unless there were any pressing issues.

If you have any comments on these notes or any other issues you wish to raise please notify Rodney on 8298 8810 or 0427 001 680.
